# DOCKMATE POSITIONING SYSTEM

dockmate 

Years of dedicated research and development ensure that the Dockmate remote control system provides boaters with the best control of their vessels in some of the more stressful situations like docking and close quarters manoeuvring.

Whether preparing to enter a marina or waiting for a bridge or lock, holding your position while stepping away from the helm can be just as important as having complete control when docking.

### **Dockmate Positioning System's 2 Operating Modes**

- Ocean Mode: Embrace freedom as DPS maintains your yacht's position using only the engines, perfect for short-handed crews to manage mooring lines and fenders before marina entry.
- Precision Mode: Witness DPS in harmony with engines and thrusters, delivering position- and heading-holding power in close quarters, ensuring peace of mind when it matters most.

### **Advanced Technology for Effortless Control**

- Powered by an IMU unit (compass, accelerometer, gyroscope) and a DPS Receiver, integrated with Dockmate triband GNSS antennas on the hardtop.
- Suitable for any vessel with Dockmate compatible controls and at least two engines, or one engine with proportional bow- and stern thrusters.
- Simple installation and setup with a short calibration sea trial.

## Key Features:

- Maintain boat's position effortlessly.
- Keep boat's heading (proportional thrusters required). Works in concert with a Dockmate wireless remote control system.
- User-friendly operation: activate or deactivate from the Dockmate Helm Display (DHD) or anywhere on the vessel with the Dockmate remote.
- Supports all (CAN bus and analogue) Dockmate compatible engine controls.
- Supports all Dockmate compatible CAN bus proportional thruster systems.

**Transform Your Boating Experience with the award winning Dockmate Positioning System.**

Dockmate Positioning System (DPS) was named a 2024 Miami Innovation Award Winner at the Discover Boating Miami International Boat Show in the Propulsion Equipment and Parts category.

Organized by the National Marine Manufacturers Association (NMMA) and judged by members of Boating Writers International (BWI), the awards recognize manufacturers and suppliers who bring new, innovative products to market.

Of DPS, judge Gary Reich said, “Dockmate DPS brings the benefits of dynamic positioning systems to hundreds of thousands of boats that previously couldn’t leverage its safety and convenience.”
